

Relations-Graphs-Trees review

1. Definitions
2. Understand theorems/algorithms
3. Apply theorems/algorithms

Relation definitions

▶ Relation from set A to set B , and relation on A ,

▶ Properties:

Reflexive, transitive, symmetric, antisymmetric.

Equivalence relation.

▶ The digraph and matrix representation of a relation.

Graphs definitions (1)

For graphs with no loops nor multiple edges

- ▶ **Connected components** of a graph
 - ▶ The **partition of vertices** into connected components
 - ▶ The **neighbourhood** of a vertex
 - ▶ **Degree** of a vertex
 - ▶ **Isolated vertices**, $\deg(v) = 0$
- ▶ **K_n , C_n , H_n** and **$K_{n,m}$** (complete bipartite)
- ▶ **Bipartite** graphs

Graphs definitions (2)

- ▶ **Paths** (closed walk, cycle, simple path, trail).
- ▶ **Eulerian** and **Hamiltonian** path /circuits
- ▶ A complete **Matching**
- ▶ **Planar graphs**
 - ▶ A **face** in a planar graph.
 - ▶ The **outer face** of a planar graph.
- ▶ A **proper colouring** of
 - ▶ the **vertices** in a graph / **faces** in a **planar graph**

Tree definitions

- ▶ A **tree**:
rooted tree, ***m*-ary tree**, full *m*-ary tree and forest.
- ▶ Vertices:
leaf (external), internal vertices,
parent and children of a vertex.
- ▶ The **depth** of a vertex; **height** of a rooted tree.
- ▶ A **spanning tree** of a connected graph.
- ▶ A **minimum spanning tree** of a graph with weighted edges.

Problems for Relations

- ▶ Given a relation R on A determine

Problems for Relations

- ▶ Given a relation R on A determine
 - ▶ its representation as a digraph or as a matrix, (also for a relation from A to B).

Problems for Relations

- ▶ Given a relation R on A determine
 - ▶ its representation as a digraph or as a matrix, (also for a relation from A to B).
 - ▶ which properties R satisfy.

Problems for Relations

- ▶ Given a relation R on A determine
 - ▶ its representation as a digraph or as a matrix, (also for a relation from A to B).
 - ▶ which properties R satisfy.
- ▶ Represent problems with relations; e.g. student/class, city/state, etc.

Hard problems for relations

- ▶ For relations $R \subset A \times B$ and $S \subset B \times A$, determine the composition relation $S \circ R$.

Hard problems for relations

- ▶ For relations $R \subset A \times B$ and $S \subset B \times A$, determine the composition relation $S \circ R$.
- ▶ Use that relation R^n connects the endpoints of paths of length n in the digraph corresponding to R .

Theorems about graphs

- ▶ The **handshaking** Theorem

Theorems about graphs

- ▶ The **handshaking** Theorem
- ▶ **Eulerian circuit/path** : **necessary and sufficient** conditions

Theorems about graphs

- ▶ The **handshaking** Theorem
- ▶ **Eulerian circuit/path** : **necessary and sufficient** conditions
- ▶ **Ore's thm**: **Sufficient** conditions for a **Hamiltonian cycle**.

Theorems about graphs

- ▶ The **handshaking** Theorem
- ▶ **Eulerian circuit/path** : **necessary and sufficient** conditions
- ▶ **Ore's thm**: **Sufficient** conditions for a **Hamiltonian cycle**.
- ▶ **Hall's thm**: **Necessary and sufficient** conditions for **matching in a bipartite** graph

Theorems about graphs

- ▶ The **handshaking** Theorem
- ▶ **Eulerian circuit/path** : **necessary and sufficient** conditions
- ▶ **Ore's thm**: **Sufficient** conditions for a **Hamiltonian cycle**.
- ▶ **Hall's thm**: **Necessary and sufficient** conditions for **matching in a bipartite** graph
- ▶ **Euler's formula**: vertices/edges/faces of **planar graphs**.

Theorems about graphs

- ▶ The **handshaking** Theorem
- ▶ **Eulerian circuit/path** : **necessary and sufficient** conditions
- ▶ **Ore's thm**: **Sufficient** conditions for a **Hamiltonian cycle**.
- ▶ **Hall's thm**: **Necessary and sufficient** conditions for **matching in a bipartite** graph
- ▶ **Euler's formula**: vertices/edges/faces of **planar graphs**.
- ▶ **4-colour thm**: **coloring faces** of planar graphs.

Theorems/algorithms for trees

- ▶ **Formula** for the number of **internal vertices**, **leaves** and **edges** in a **full m -ary trees**

Theorems/algorithms for trees

- ▶ **Formula** for the number of **internal vertices**, **leaves** and **edges** in a **full m -ary trees**
- ▶ **Objective** and **pseudocode** of

Theorems/algorithms for trees

- ▶ **Formula** for the number of **internal vertices**, **leaves** and **edges** in a **full m -ary trees**
- ▶ **Objective** and **pseudocode** of
 - ▶ Depth-first search.

Theorems/algorithms for trees

- ▶ **Formula** for the number of **internal vertices**, **leaves** and **edges** in a **full m -ary trees**
- ▶ **Objective** and **pseudocode** of
 - ▶ Depth-first search.
 - ▶ Breadth-first search.

Theorems/algorithms for trees

- ▶ **Formula** for the number of **internal vertices**, **leaves** and **edges** in a **full m -ary trees**
- ▶ **Objective** and **pseudocode** of
 - ▶ Depth-first search.
 - ▶ Breadth-first search.
 - ▶ Prim's algorithm.

Theorems/algorithms for trees

- ▶ **Formula** for the number of **internal vertices**, **leaves** and **edges** in a **full m -ary trees**
- ▶ **Objective** and **pseudocode** of
 - ▶ Depth-first search.
 - ▶ Breadth-first search.
 - ▶ Prim's algorithm.
 - ▶ Kruskal's algorithm.

Hard problems for graphs/trees

- ▶ Use that $K_{3,3}$, K_5 are non-planar graphs.

Hard problems for graphs/trees

- ▶ Use that $K_{3,3}$, K_5 are non-planar graphs.
- ▶ Give examples of

Hard problems for graphs/trees

- ▶ Use that $K_{3,3}$, K_5 are non-planar graphs.
- ▶ Give examples of
 - ▶ graphs (not) satisfying the conditions of theorems above.

Hard problems for graphs/trees

- ▶ Use that $K_{3,3}$, K_5 are non-planar graphs.
- ▶ Give examples of
 - ▶ graphs (not) satisfying the conditions of theorems above.
 - ▶ applications that use trees and the algorithms above.

Hard problems for graphs/trees

- ▶ Use that $K_{3,3}$, K_5 are non-planar graphs.
- ▶ Give examples of
 - ▶ graphs (not) satisfying the conditions of theorems above.
 - ▶ applications that use trees and the algorithms above.
- ▶ Given a problem involving graphs or trees, determine which of the algorithms/theorems above can be applied.
